Introduction

Web scraping is the process of automatically collecting data from websites using programming techniques. It enables users to extract large amounts of information quickly and efficiently without manual effort.

In this project, Python is used along with the Requests and BeautifulSoup libraries to scrape shoe product data from the Flipkart e-commerce website. The scraper sends requests to the website, retrieves the HTML content, and extracts relevant product information.

The main objective of this project is to collect structured data such as **Brand Name**, **Shoe Name**, **Price**, and **Image Link** from Flipkart product listings. The extracted data is then organized into a structured format using the Pandas library and stored in a CSV file for further analysis and processing.

This project provides practical experience in web scraping, data extraction, data cleaning, and data management using Python. It also helps in understanding the structure of real-world e-commerce websites and demonstrates how valuable business information can be collected and analyzed efficiently.

Problem Statement

E-commerce platforms like **Flipkart** contain a vast amount of product information, but this data is often presented in an unstructured format that is difficult to analyze directly. Manually collecting details such as **Brand Names**, **Shoe Names**, **Prices**, and **Product Images** is time-consuming, repetitive, and inefficient.

The challenge is to develop an automated solution that can efficiently extract shoe product data from Flipkart using web scraping techniques in Python. The extracted information should be organized into a structured format for easy storage, analysis, and future use.

This project focuses on converting unstructured web data into a meaningful dataset by utilizing Python libraries such as **Requests**, **BeautifulSoup**, and **Pandas**. The final dataset can be used for market analysis, price comparison, trend identification, and other data-driven applications.

What is the advantage of UPI transfers over wallets?\_\_\n\n'Unified Payment Interface' (UPI) is an instant payment system that allows you to transfer money directly from your bank account. "savedCardFAQ": "\_\_Why is my card being tokenised?\_\_\n\nAs per the new RBI guidelines to make card data more secure, merchants like Flipkart cannot store the card details of users. As an alternative, RBI has authorised card networks and card issuers to offer card tokenisation services, which means the replacement of actual credit and debit card details with an alternate code called "token". The user can either choose to tokenise their card by giving consent for future transactions or choose to continue without tokenisation.\n\n\_\_What is a token?\_\_\n\nA token is generated when a user gives consent to Flipkart to tokenise their card. A token is a unique value for a combination of card, token requestor (Flipkart is a token requestor & accepts request from the customer for tokenisation of a card and passes it onto the card network to issue a corresponding token) and device. The token does not contain any personal information linked to your card and is generated only when a customer uses a new card for a successful transaction on Flipkart.\n\n\_\_Is it safe to tokenise my card?\_\_\n\nYes. A tokenised card transaction is considered safer as the actual card details are not shared with the Flipkart during transaction processing. Card information is stored with the authorised card networks or card issuers only and Flipkart does not store your 16-digit card number.\n\n\_\_Is tokenisation of card mandatory?\_\_\n\nNo, customer can choose whether or not to tokenise their card.\n\n\_\_What happens if I don't give consent to secure my card?\_\_\n\nIf you don't give consent to tokenise your card, you need to enter your card details for every transaction as stipulated under the RBI guidelines."

While this is obviously faster, it is also very secure.\n\n\_\_Is it safe to save my UPI on Flipkart?\_\_\n\nAbsolutely. Your UPI ID information is 100 percent safe with us. UPI ID details are non PCI compliant and are non confidential data.\n\n\_\_What all UPI information does Flipkart store?\_\_\n\nFlipkart only stores UPI ID and payment provider details. What payment options does PhonePe provide?__\n\n PhonePe is a new mobile payment solution. Our goal is to make digital payments so easy and safe that people never have to carry cash or cards again! You can use PhonePe as a wallet or directly make transfers through your linked bank account using UPI. It's safe, easy and instant, you have to use it to believe it!\n\n__What is UPI? What is the advantage of UPI transfers over wallets?__\n\n 'Unified Payment Interface' (UPI) is an instant payment system that allows you to transfer money directly from your bank account. The best part about UPI is that it allows you to make payments with a few clicks without the hassle of sharing bank a/c details or typing your card details, net banking password, OTP, etc. There are many advantages of UPI. The main advantage is that you don't have to block your money by loading it into a wallet. As an alternative, RBI has authorised card networks and card issuers to offer card tokenisation service

s, which means the replacement of actual credit and debit card details with an alternate code called “token”. The user can either choose to tokenise their card by giving consent for future transactions or choose to continue without tokenisation.

What is a token?

A token is generated when a user gives consent to Flipkart to tokenise their card. A token is a unique value for a combination of card, token requestor (Flipkart is a token requestor & accepts request from the customer for tokenisation of a card and passes it onto the card network to issue a corresponding token) and device. The token does not contain any personal information linked to your card and is generated only when a customer uses a new card for a successful transaction on Flipkart.

Is it safe to tokenise my card?

Yes. A tokenised card transaction is considered safer as the actual card details are not shared with the Flipkart during transaction processing. Card information is stored with the authorised card networks or card issuers only and Flipkart does not store your 16-digit card number.

Is tokenisation of card mandatory?

No, customer can choose whether or not to tokenise their card.

What happens if I don't give consent to secure my card?

If you don't give consent to tokenise your card, you need to enter your card details for every transaction as stipulated under the RBI guidelines.

Why is my UPI being saved on Flipkart?

It's quicker. You can save the hassle of typing in the complete UPI information every time you shop at Flipkart by saving your UPI details. You can make your payment by selecting the saved UPI ID of your choice at checkout. While this is obviously faster, it is also very secure.

Is it safe to save my UPI on Flipkart?

Absolutely. Your UPI ID information is 100 percent safe with us. UPI ID details are non PCI compliant and are non confidential data.

What all UPI information does Flipkart store?

Flipkart only stores UPI ID and payment provider details. We do not store UPI PIN/MPIN.

Can I delete my saved UPI?

Yes, you can delete your UPI ID at any given time.

Conclusion

This project successfully demonstrated the application of web scraping techniques to collect shoe product data from the Flipkart website. Using Python libraries such as Requests, BeautifulSoup, and Pandas, valuable product information including Brand Name, Shoe Name, Price, and Image Link was extracted and organized into a structured dataset.

The extracted data was further processed, converted into a DataFrame, and exported to a CSV file for future analysis. This project provided practical experience in website structure analysis, HTML parsing, data extraction, and data management.

Overall, the project highlights how web scraping can automate data collection from e-commerce platforms, reduce manual effort, and support data-driven decision making.
