

Web Scraping and Analysis of Forex Currencies Data

Minor Project Report

Student Name: Gautam Kapoor

Roll Number: 8524271

Branch: B.Tech (Artificial Intelligence & Machine Learning)

College: JMIETI, Radaur

Organizing Company: CodroidHub Private Limited

Project Type: Minor Project

Domain: Web Scraping

Technology Stack: Python, Requests, BeautifulSoup, Pandas

Data Source: Yahoo Finance (Forex Currencies)

Target Website: <https://finance.yahoo.com/markets/currencies/>

Academic Session: 2024–26

🌐 Data Extraction • 📄 HTML Parsing • 🗂 Data Cleaning • 📁 Dataset Creation • 💾
CSV Export

Project Agenda

Section	Description
 Project Overview	Introduction to the Forex Currencies Web Scraping project
 Project Objectives	Goals and expected outcomes of the project
 Technology Stack	Python, Requests, BeautifulSoup, Pandas
 Data Source	Yahoo Finance - Forex Currencies
 Import Libraries	Import required Python libraries
 HTTP Request	Fetch webpage using Requests library
 HTML Parsing	Parse webpage using BeautifulSoup
 Data Extraction	Extract Forex currency information
 Data Cleaning	Organize and clean the extracted data
 DataFrame Creation	Store data into a Pandas DataFrame
 Data Analysis	Preview and analyze the collected dataset
 CSV Export	Save the dataset into a CSV file

Conclusion

Summary of the project and key outcomes

Install Required Libraries

```
In [1]: # !pip install request
import requests
```

Define Yahoo Finance URL

```
In [2]: url= "https://finance.yahoo.com/markets/currencies/"
response= requests.get(url)
```

Check Response Status Code

```
In [3]: response.status_code
```

```
Out[3]: 429
```

Import Requests Library

```
In [4]: import requests

url = "https://finance.yahoo.com/markets/currencies/"
headers = {
    'User-Agent': 'Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/91.0.4472.
}
```

```
response = requests.get(url, headers=headers)

print(response.status_code)
print(response.text[:500]) # first 500 characters
```

200

```
<!doctype html>
<html lang="en-US" theme="auto" data-color-theme-enabled="true" data-color-scheme="auto" class="desktop neo-green doc
k-upscale failsafe">
  <head>
    <meta charset="utf-8">
    <meta name="oath:guce:consent-host" content="guce.yahoo.com">
    <link rel="preconnect" href="//s.yimg.com" crossorigin="anonymous"><link rel="preconnect" href="//geo.yahoo.c
om"><link rel="preconnect" href="//query1.finance.yahoo.com"><link rel="preconnect" href="//consent.cmp.oath.com"><li
```

Display HTML Content

In [5]: `print(response.text)`

```

<!doctype html>
<html lang="en-US" theme="auto" data-color-theme-enabled="true" data-color-scheme="auto" class="desktop neo-green doc
k-upscale failsafe">
  <head>

Time\":1782396000000,\"period\":"May\", \"prior\":"2.5\", \"description\":"In any given month, the rate of inflation in a price index like the Consumer Price Index or Personal Consumption Expenditures (PCE) can be thought of as a weighted average, or mean, of the rates of change in the prices of all the goods and services that make up the index. Calculating the trimmed-mean PCE inflation rate for a given month involves looking at the price changes for each of the individual components of personal consumption expenditures. The individual price changes are sorted in ascending order from the most to the most, and a certain fraction of the most extreme observations at both ends of the spectrum are like a skaters best and worst marks thrown out, or trimmed. The inflation rate is then calculated as a weighted average of the remaining components. For the series presented here, 19.4 percent of the weight from the lower tail and 25.4 percent of the weight in the upper tail are trimmed. Those proportions have been chosen, based on historical data, to give the best fit between the trimmed-mean inflation rate and proxies for the true core PCE inflation rate. The resulting inflation measure has been shown to outperform the more conventional excluding food and energy measure as a gauge of core inflation. \"},{\"economicEvents\":true,\"event\":"PCE Price Index YY *\", \"countryCode\":"US\", \"eventTime\":1782396000000,\"period\":"May\", \"actual\":"4.1\", \"prior\":"3.8\", \"description\":"The personal outlay account shows the uses of income of individuals, enterprises that are owned by households, and nonprofit institutions that serve households. Calculating the trimmed-mean PCE inflation rate for a given month involves looking at the price changes for each of the individual components of personal consumption expenditures. The individual price changes are sorted in ascending order from the most to the most, and a certain fraction of the most extreme observations at both ends of the spectrum are like the skaters best and worst marks thrown out, or trimmed. The inflation rate is then calculated as a weighted average of the remaining components. For the series presented here, 19.4 percent of the weight from the lower tail and 25.4 percent of the weight in the upper tail are trimmed. Those proportions have been chosen, based on historical data, to give the best fit between the trimmed-mean inflation rate and proxies for the true core PCE inflation rate. The resulting inflation measure has been shown to outperform the more conventional excluding food and energy measure as a gauge of core inflation. "},{economicEvents":true,"event":"PCE Price Index YY *","countryCode":"US","eventTime":1782396000000,"period":"May","actual":"4.1","prior":"3.8","description":"The personal outlay account shows the uses of income of individuals, enterprises that are owned by households, and nonprofit institutions that serve households. Personal outlays is the sum of personal consumption expenditures, personal interest payments and personal current transfer payments. Personal consumption expenditures is the largest component of GDP as households are the largest consumer of U.S. final product. Personal consumption expenditures measures purchases of goods and services by households and by nonprofit institutions serving households (NPISHs) from private business. It also includes purchases of certain goods and services provided by general government and government enterprises, such as tuition payments for higher education, charges for medical care, and charges for water and other sanitary services. In addition, PCE includes imputed expenditures on items such as the services of housing by a homeowner (the equivalent of rent), financial and insurance services for which there is no explicit charge, and medical care provided to individuals and finan
